#AskTheHIVDoc Returns With More Bite-Size Explainers [VIDEOS]

Dr. David Malebranche offers easy-to-understand answers to questions about treatments, HIV care, CD4 counts and more.

March 4, 2019 By Trent Straube

How does HIV treatment work? How long does it take to become undetectable? What's the difference between a CD4 and T-cell count? And what about viral loads and drug resistance?

If you have questions about HIV care and treatment, you're not alone. Thankfully, the easy-to-understand video explainer series #AskTheHIVDoc is here to help. Originally launched in 2015, the series recently posted a new collection of short videos featuring "Dr. David," aka David Malebranche, MD, MPH, from the Morehouse School of Medicine in Atlanta.

Here's a video introduction to Dr. David:

In his practice, Malebranche specializes in the treatment and prevention of HIV and sexually transmitted infections. What's more, his professional interests include addressing racial inequalities and LGBT health.

These free and easy-to-understand videos offer members of all communities a simple way to empower and educate themselves with knowledge.

Watch a sample video "Let's Talk About Care & Treatment" atop this article. You can watch a collection of the videos on the GreaterThan.org site here.

Greater Than AIDS is a collective effort of several groups to offer HIV information and educational campaigns to communities most affected by the epidemic, such as African Americans.
