The Autism Job Club: The Neurodiverse Workforce in the New Normal of Employment

by Susan K. Delaine

The Autism Job Club is a groundbreaking book for bringing adults with autism and other neuro-diverse conditions into the work world.

The book has its basis in the autism job club that the authors have been part of in the San Francisco Bay Area, the job-creation and job-placement efforts the club has undertaken, and similar efforts throughout the United States.

The authors review the high unemployment rates among adults with autism and other neuro-diverse conditions more than two decades after the ADA. National data on autism employment and unemployment with the individual employment searches of job club members.

Bernick and Holden also outline and explain six strategies that, taken together, will reshape employment for adults with autism:

- The art of the autism job coach.
- The autism advantage in technology employment.
- Autism employment and the internet economy.
- Autism employment and the practical/craft economy.
- Autism and extra-governmental job networks.
- Autism and public service employment.

The Autism Job Club will be a vital resource for adults with autism, their families, and advocates who are committed to neuro-diverse employment, not unemployment. The Environmental and Genetic Causes of Autism

by James Lyons-Weiler, PhD

The Environmental and Genetic Causes of Autism delves deep into the full body of past and current research to reveal how genetic predispositions and environmental factors can combine to produce the conditions autism and autism spectrum disorders (ASD).

To make this groundbreaking volume, Dr. James Lyons-Weiler combed through the past fifty years of published research on autism, exploring subjects such as genetic variation, mechanisms of neurotoxicity of metals and pesticides, and the central and combined roles of each in causing autism.

Lyons-Weiler provides a major overview of all aspects of the condition of autism, reviews changes in diagnoses and treatments, and explains how genetic information can be used to tailor effective treatments, and sometimes reversals, of the symptoms. He also presents practical forward-looking suggestions on how to design future studies to facilitate the discovery of biomarkers for autism risk and how to classify the full range of autism spectrum disorders.

Autism is considered one of the most mystifying conditions of our day, and alarmed scientists, doctors, politicians, and parents are desperately trying to understand why the condition is escalating. According to the CDC, rates in the United States have risen from an estimated one in two thousand children in 1980, to one in sixty-eight in 2012, and a new National Health Interview Survey shows a rate of one in forty-five. By the time you read this book, that number may have changed yet again.

While most autism researchers focus on either environmental or genetic causes of autism, Lyons-Weiler's opus demonstrates that to fully understand the condition and to finally put its rate on the decrease, it is essential to pay attention to the science showing how the two classes of factors interact.

Finding Lina: A Mother's Journey from Autism to Hope

by Helena Hjalmarsson

Lina was a normal and precocious toddler—charming, chatty, and joyful—but at the age of three came the first seizure, followed, to her parents' horror, by the loss of her ability to play, use language, and control her impulses. Over the next few years Lina seemed further and further away. She communicated her acute discomfort by biting, screaming, hitting, laughing maniacally, and throwing violent tantrums. As a single mother, with the help of her ex-husband, Helena tirelessly pursued every possible avenue to find a treatment.

Soon, Helena and Lina's new normal would be special schools, restrictive diets, sensory stimulation, relationship-based therapy, gastroenterology, homeopathy, sign language, and allergy treatment. A mother and daughter's life together had irrevocably changed. But with the extraordinary help, patience, and understanding of friends and family, and Lina's own strength and perseverance, that new life has become one of inspiration, healing, and transcendent love.

Unflinchingly raw and courageous, Finding Lina "is not only a mother's painfully honest account of coming to terms with her daughter's autism, but an offering of insight and new possibility to parents facing similar situations. This is a story that resonates beyond the specific illness, with a universality both heart-rending and inspiring" (New York Times bestselling author Dick Russell).

How to Prevent Autism: Expert Advice from Medical Professionals

by Dara Berger

The statistics are alarming and become more so every year. The Centers for Disease Control and Prevention estimates that 1 in 68 children have been identified with an autism spectrum disorder, making it one of the fastest growing developmental disorders in the United States. Further, the CDC estimates that parents with a child on the autism spectrum can have nearly a 20 percent chance of having a second child with autism.

In *How to Prevent Autism*, Dara Berger shares her personal journey with autism. She describes everything that went wrong with her son that led to an autism diagnosis and everything she did differently to prevent her daughter from suffering the same fate. She interviews eight well-known ASD experts--including doctors, nutritionists, nurses, and scientists--about the factors that have led to the growing epidemic of autism. Based on the best practices for preventing autism in children, each professional offers perspectives grounded in their own research and their patients' improvements. The book covers every detail--from the importance of mothers' cleaning out their bodies pre-conception, through common genetic mutations that may put children at risk, to the crucial role of nutrition in prevention.

All parents agree that every choice counts when it comes to the health of their children. As Dara Berger makes clear in this personal, informative, and authoritative book, the stakes could not be higher when it comes to autism.
